UV curing technology captures India

Visitors to PrintPack India 2011 respond with great interest to Hönle Group's UV curing systems

During PrintPack India 2011, which took place in New Delhi from 16th to 21st January 2011, visitors could get a very good overview of the whole printing industry. Sharing a stand with manroland, the Hönle Group, represented by Hönle and Eltosch, showed their wide range of UV products and systems – which the visitors were very impressed by and interested in.

The printing market in India still holds huge growth potential. And the demands for the quality of print products are constantly increasing. As a result, potential customers are more interested in UV printing applications than ever before.

The Hönle Group's UV specialists were able to present recent developments regarding process engineering to many visitors – and to inform them about the great advantages of UV technology. „We are very happy about this overwhelming interest for our products and for our know-how in UV technology“, emphasizes Ronny Müller, Managing Director of the Hönle-subsi-dary Eltosch. „India is a fast-growing future market. And we have managed to set the course for a successful future of the Hönle Group in India – not at least by exhibiting at this show.“
